O'REILLY®

Microsoft Azure Developer Associate (AZ-204) Crash Course

Developing Solutions for Microsoft Azure

Reza Salehi

Cloud Consultant and Trainer

@zaalion

Course Overview

AZ-204 Skills Measured

Exam AZ-204: Developing Solutions for Microsoft Azure

Questions & Resources

- Please post questions in the Q&A box
- The course repository
  - https://github.com/zaalion/oreilly-az-204

- Reach out:
  - Twitter: @zaalion

AZ-204 Candidate Profile

- Professionals who:
  - Have subject matter expertise designing, building, testing, and maintaining cloud applications and services on Microsoft Azure.

Azure Data Engineers

- Should have 1-2 years professional development experience
- Experience with Microsoft Azure
- Can program in a language supported by Azure

AZ-204 Candidates

- Proficiency in
  - Azure SDKs, Azure PowerShell, Azure CLI,
  - Data storage options, data connections, APIs,
  - App authentication and authorization
  - Compute and container deployment
  - Debugging, performance tuning, and monitoring.

AZ-204 Skills Measured

- Skills measured:
  - Develop Azure compute solutions (25-30%)
  - Develop for Azure storage (15-20%)
  - Implement Azure security (20-25%)
  - Monitor, troubleshoot, and optimize Azure solutions (15-20%)
  - Connect to and consume Azure services and third-party services (15-20%)

Develop Azure Compute Solutions

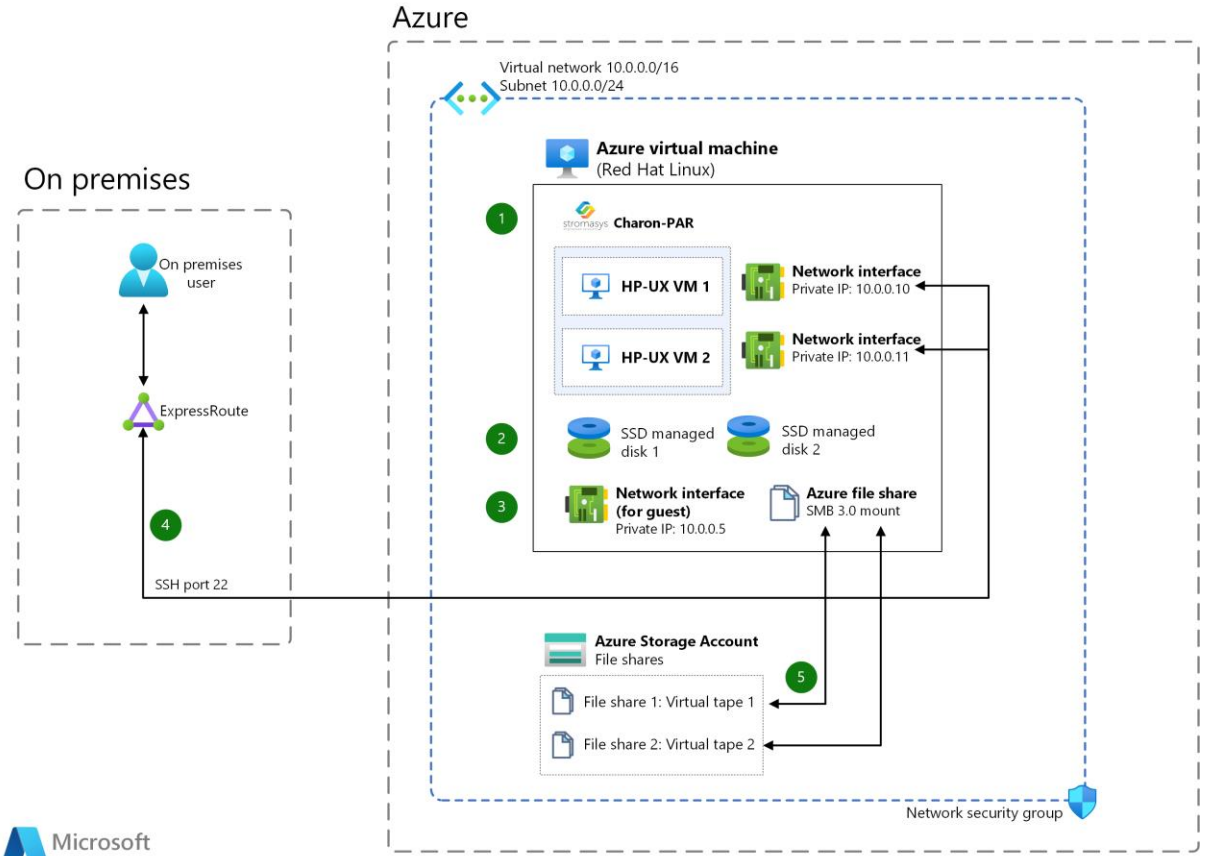
Develop Azure Compute Solutions

- Implement containerized solutions
- Create Azure App Service Web Apps
- Implement Azure functions

Implement containerized solutions

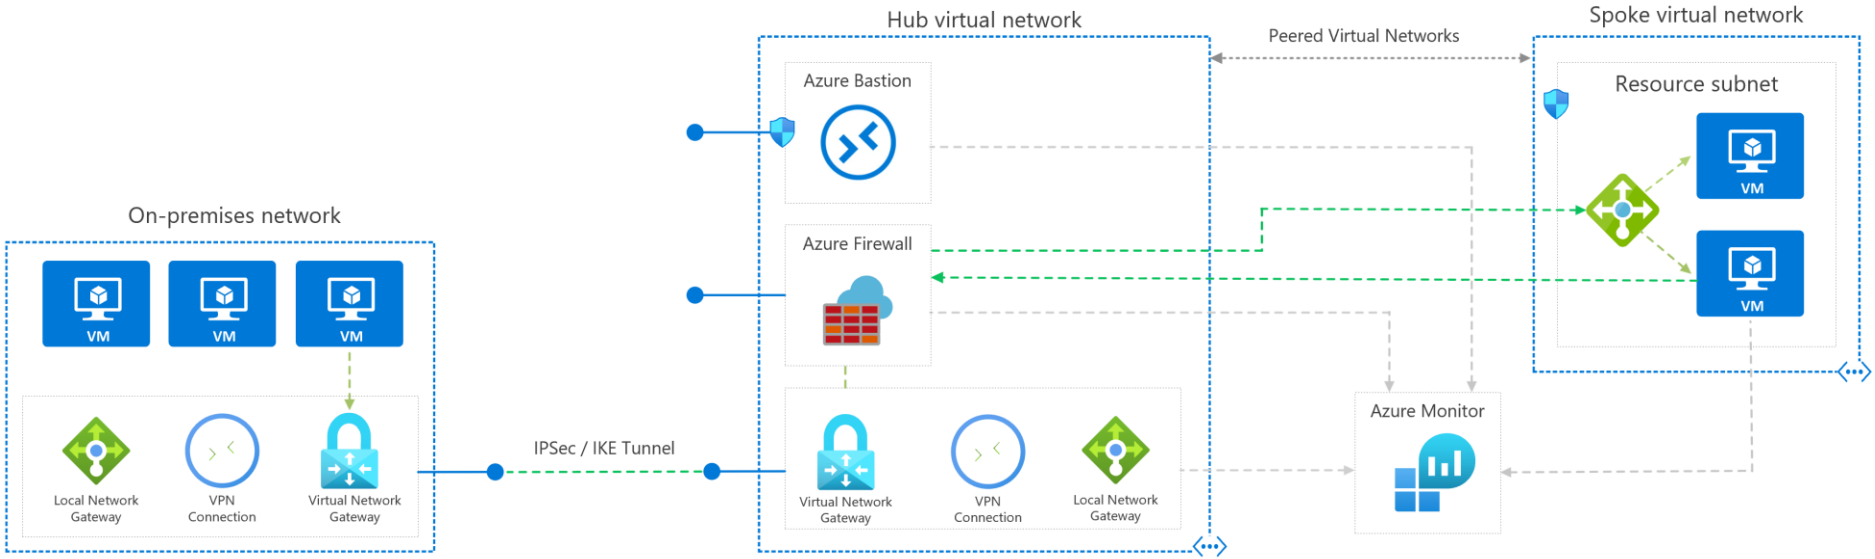
- Create and manage container images for solutions [see 1 2]
- Publish an image to the Azure Container Registry [see 1 2 3 4]
- Run containers by using Azure Container Instance [see 1 2 3]
- Create solutions by using Azure Container Apps [see 1 2]

Implement IaaS solutions



Microsoft Azure

Implement IaaS solutions

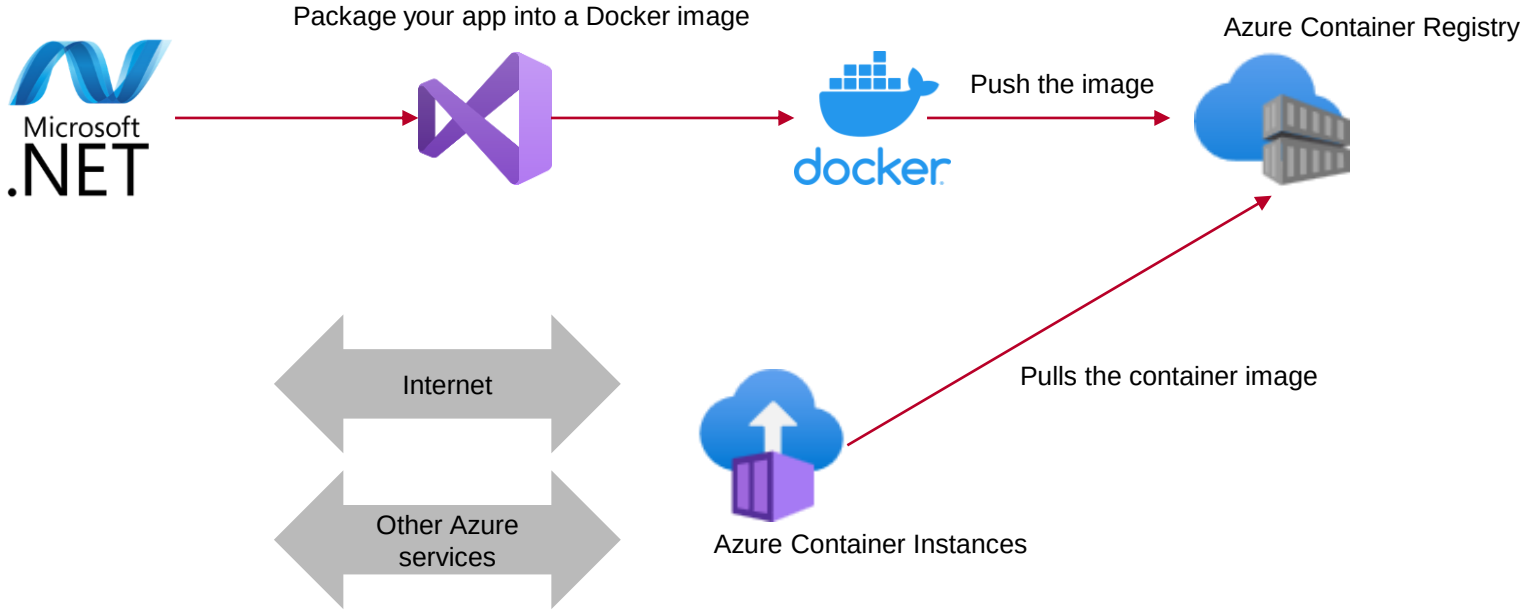


ARM Templates

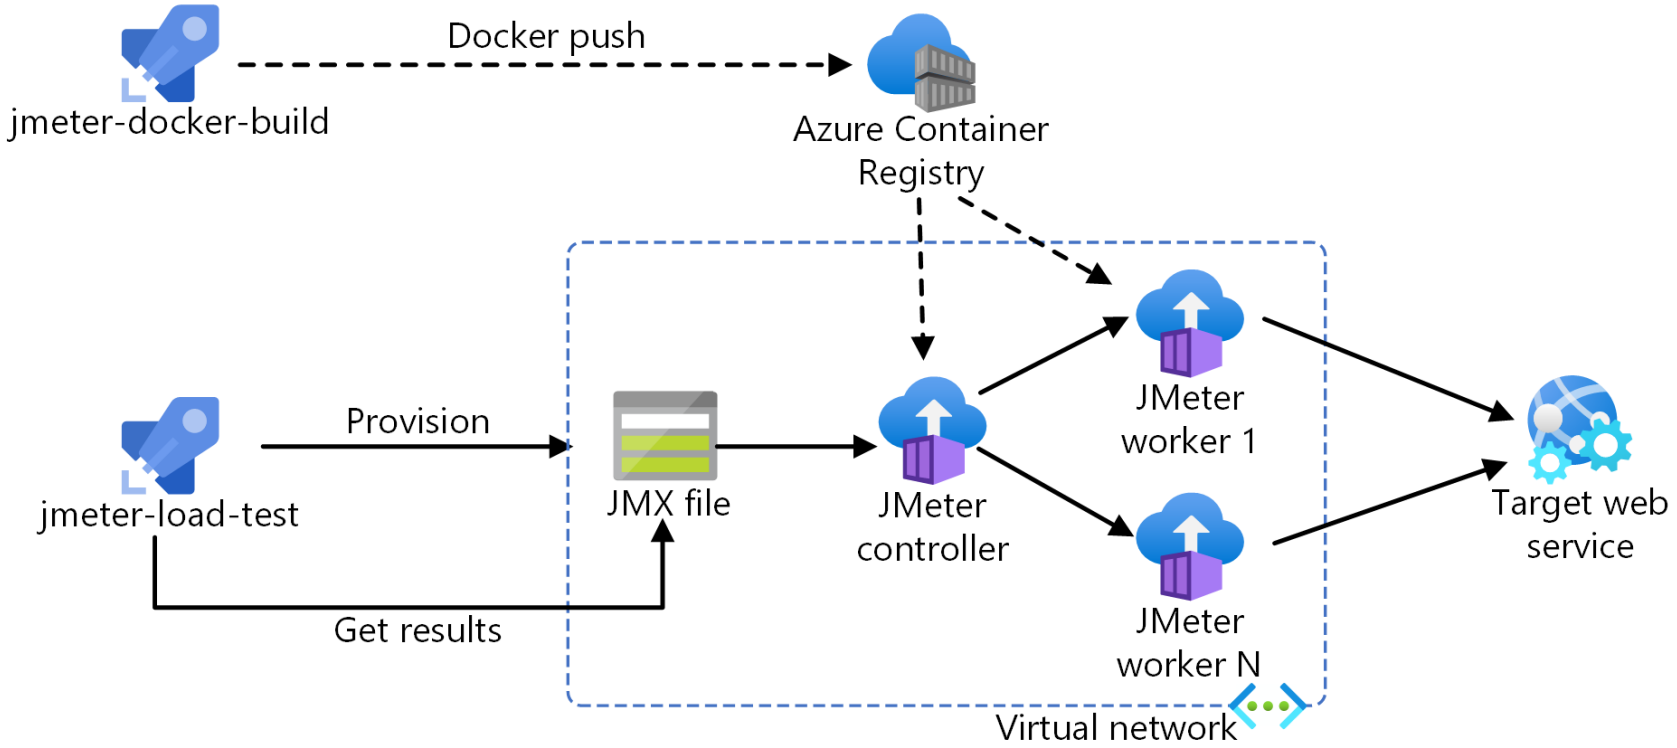
JSON Copy

```
{
  "$schema": "https://schema.management.azure.com/schemas/2019-04-01/deploymentTemplate.json#",
  "contentVersion": "",
  "apiProfile": "",
  "parameters": {  },
  "variables": {  },
  "functions": [  ],
  "resources": [  ],
  "outputs": {  }
}
```

Host Your Code in ACI



https://docs.microsoft.com/en-us/azure/container-instances/container-instances-overview



Microsoft Azure

Create Azure App Service Web Apps

- Create an Azure App Service Web App [see 1 2 3]
- Enable diagnostics logging [see 1]
- Deploy code to a web app [see 1 2 3 4]
- Configure web app settings including SSL, API settings, and connection strings [see 1 2]
- Implement auto [see 1]

Azure App Services

Azure App Service is an HTTP-based service for hosting web applications, REST APIs, and mobile back ends. It can host .NET, .NET Core, Java, Ruby, Node.js, PHP, or Python code

https://docs.microsoft.com/en-us/azure/app-service/overview

Azure App Services

- Is a PaaS service, which means less administrative overhead comparing to IaaS services
- The service is managed by Azure. You just deploy your code and run it
- Host websites and RESTful APIs using the web app feature
- Other apps such as mobile app back ends or automated business processes
- Use for legacy and new applications
- Global scale with high availability

https://docs.microsoft.com/en-us/azure/app-service/overview

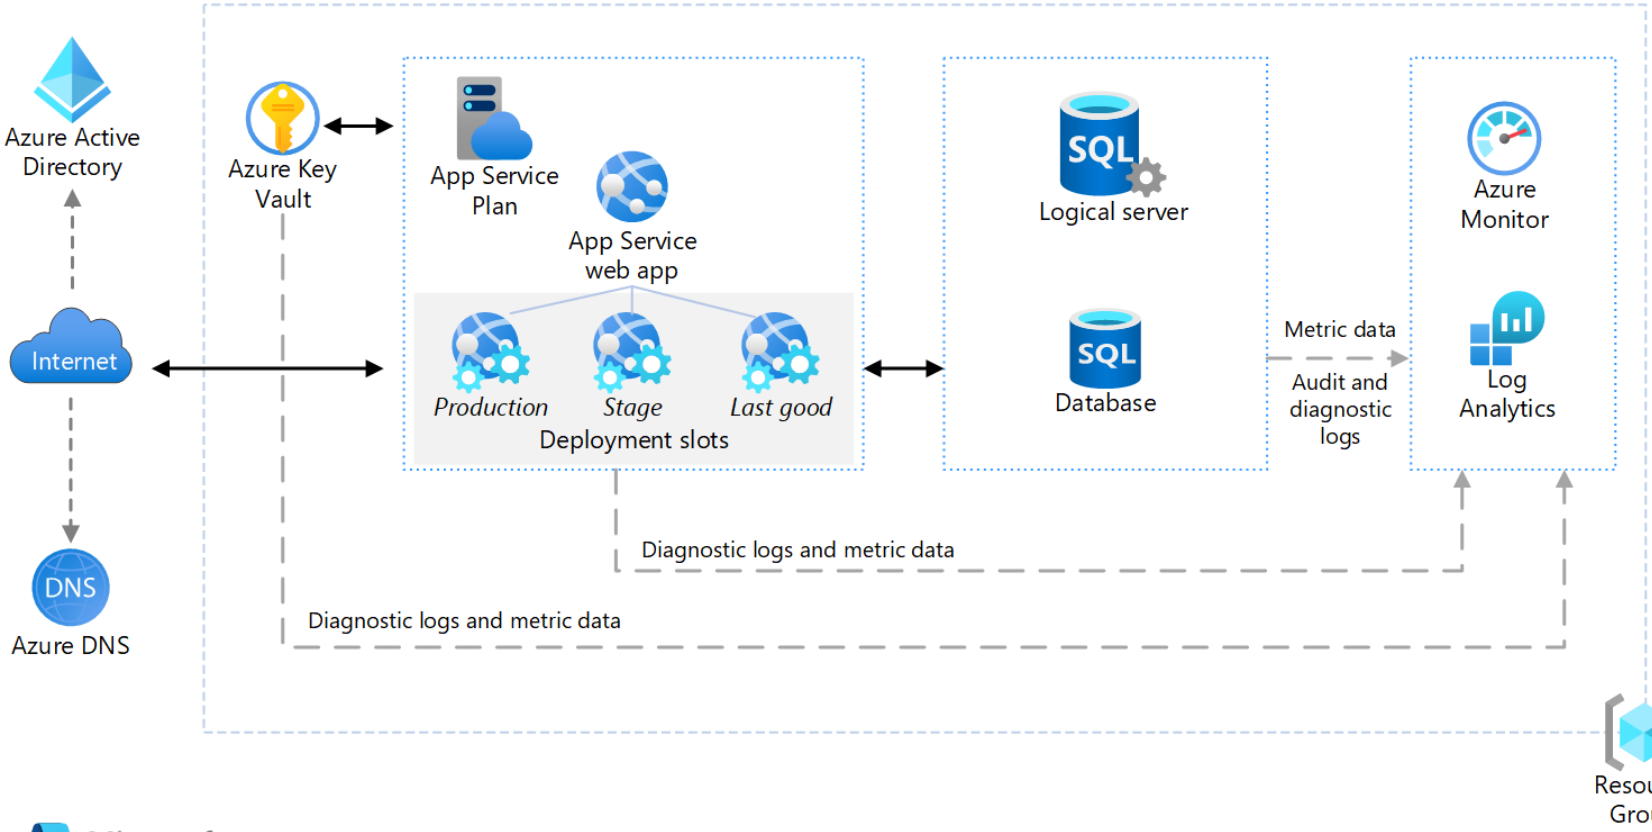
Web Application



Microsoft Azure

Implement Azure functions

- Create and configure an Azure Function App [see 1 2 3]
- Implement input and output bindings [see below]
- Implement function triggers by using data operations, timers, and webhooks [see 1 2 3 4]

Azure Functions

- Run isolated pieces of code in a serverless solution.
- Best to host microservices and APIs (HTTP, and other types)

https://docs.microsoft.com/en-us/azure/azure-functions/functions-overview

Azure Functions

- A serverless PaaS
- The service is managed by Azure. Just deploy your code and run it
- Host APIs and microservices
- Use for legacy and new applications
- Automatic scale and high availability

https://docs.microsoft.com/en-us/azure/azure-functions/functions-overview

Develop for Azure Storage

Develop for Azure storage

- Develop solutions that use Cosmos DB storage
- Develop solutions that use blob storage

Develop solutions that use Cosmos DB storage

- Perform operations on containers and items by using the SDK [see 1 2]
- Set the appropriate consistency level for operations [see 1]
- Manage change feed notifications [see 1, 2]

Consistency Levels in Azure Cosmos DB

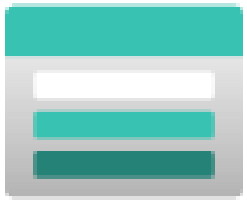
External services

Develop solutions that use blob storage

- Set and retrieve properties and metadata [see 1]
- Perform operations on data by using the appropriate SDK [see 1 2]
- Implement storage policies, and data lifecycle management [see 1 2 3 4]
- Implement static site hosting [see 1]

Azure Storage Account

Contains all Azure Storage data objects, including blobs, file shares, queues, and tables.



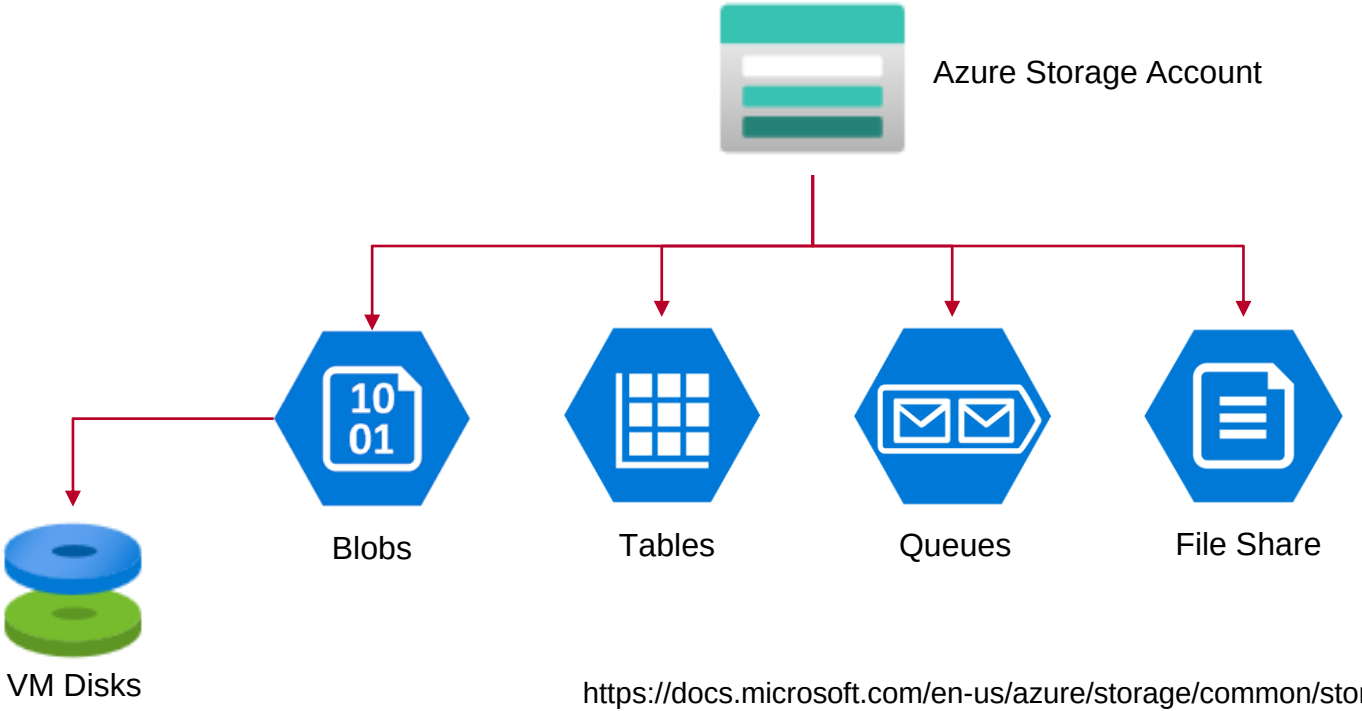
https://docs.microsoft.com/en-us/azure/storage/common/storage-account-overview

Azure Storage Account

- Accessible from around the globe over HTTP(S)
- Store blobs, tables, queues, and file shares
- Access via public and private endpoints
- Financially-backed SLA
- Security-in-depth (firewall, in transit, at rest)

https://docs.microsoft.com/en-us/azure/storage/common/storage-account-overview

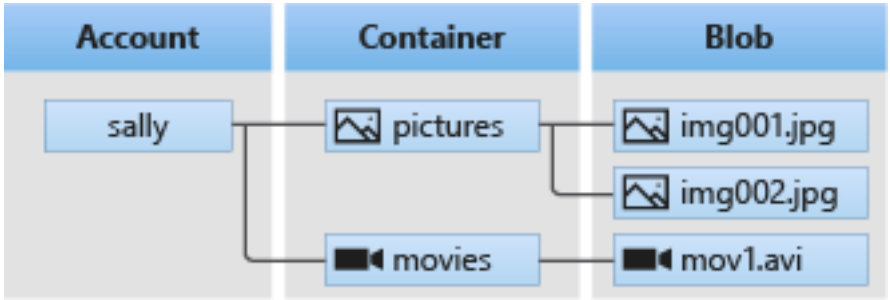
Azure Storage Services



https://docs.microsoft.com/en-us/azure/storage/common/storage-introduction

Azure Storage Account: Blobs

A scalable object store for text/binary files (unstructured data). Also includes support for big data analytics through Data Lake Storage Gen2



https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blobs-introduction

Implement Static Site Hosting

Implement Azure Security

Implement Azure Security

- Implement user authentication and authorization
- Implement secure cloud solutions

Implement user authentication and authorization

- Authenticate and authorize users by using the Microsoft Identity platform [see 1 2 3 4 5]
- Authenticate and authorize users and apps by using Azure Active Directory [see 1 2]
- Create and implement shared access signatures [see 1 2]
- Implement solutions that interact with Microsoft Graph [see 1 2 3 4 5]

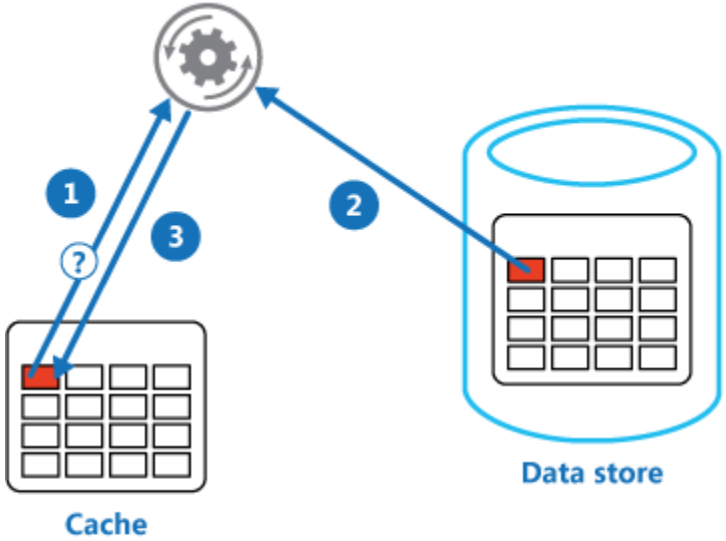
Monitor, Troubleshoot, and Optimize Azure Solutions

Monitor, troubleshoot, and optimize Azure solutions

- Implement caching for solutions
- Troubleshoot solutions by using Application Insights

Implement caching for solutions

- Configure cache and expiration policies for Azure Cache for Redis [see 1 2 3]
- Implement secure and optimized application cache patterns including data sizing, connections, encryption, and expiration [see 1]
- Implement Azure CDN endpoints and profiles [see 1 2]



1: Determine whether the item is currently held in the cache.
2: If the item is not currently in the cache, read the item from the data store.
3: Store a copy of the item in the cache.

Exam AZ-204: Developing Solutions for Microsoft Azure

United States

Languages: English, Japanese, Chinese (Simplified), Korean, French, German, Spanish, Portuguese (Brazil), Russian, Chinese (Traditional), Italian, Indonesian (Indonesia), Arabic (Saudi Arabia)
Retirement date: none

This exam measures your ability to accomplish the following technical tasks: develop Azure compute solutions; develop for Azure storage; implement Azure security; monitor, troubleshoot, and optimize Azure solutions; and connect to and consume Azure services and third-party services. You will be able to select the code language (C# or Python) that's included in the questions when you launch the exam.

$165 USD*

Price based on the country or region in which the exam is proctored.

Schedule exam >

Where do you want to take your exam?

At a test center | OnVUE Online at my home or office | I have a Private Access Code

Prepare for your online exam at your home or office

Your computer

Use a personal computer that has a reliable webcam and internet connection.

Run system test.

Your testing space

The room should be a distraction-free, private place.

See acceptable spaces and view permitted comfort aid list.

Your photo ID

We'll verify your government-issued identification (ID) when you arrive for your exam.

Review admission & ID policies

What to expect

Check in for your OnVUE exam 30 minutes before your appointment time.

Watch our short video to get familiar with the process.

Questions?

Check out the OnVUE FAQs and minimum technical requirements.

Cart

Review and confirm contact information to avoid issues on test day.

Available Products

In addition to scheduling your exam, you might be interested in the following products.

Microsoft Official Practice Test powered by MeasureUp - 30 day online access
Get a discount on available Microsoft Official Practice Test for Microsoft certification exams (Fundamentals, Role-based, or Specialty) 30-day online access.

Special offer: Regularly priced at USD 99.00! Click here for details

More Details

USD 80.00

Add to Order

It’s time to test your system

Order #: 0064-8802-7606

Your appointment is confirmed! An order confirmation containing important exam day information has been sent to: zaalion@gmail.com

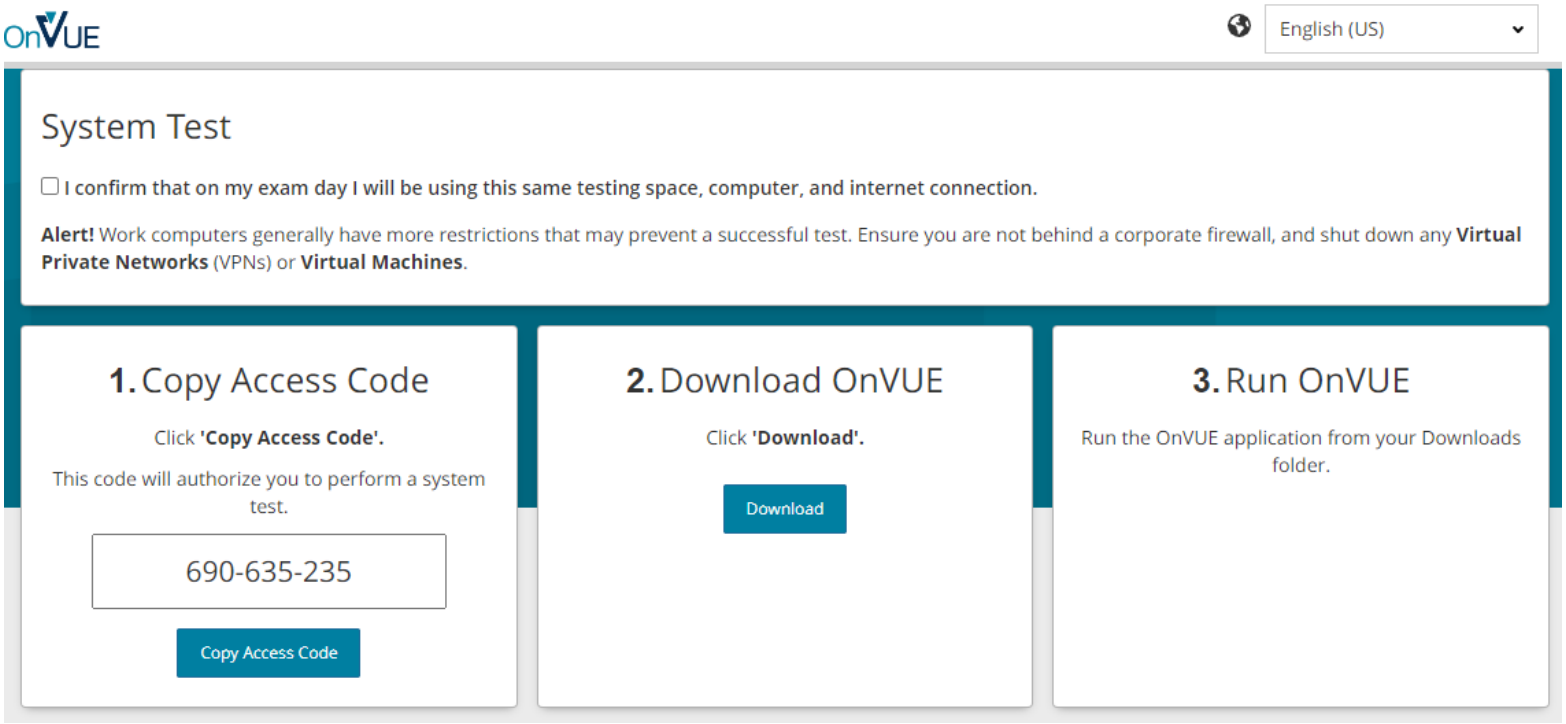
What's next?

Run a system test

We need to verify that the computer and internet connection you plan to use on exam day meet the minimum requirements for online testing. It’ll just take 5 minutes to run:

- Equipment and internet connection checks
- Exam simulation

Description	Details	Order Information	Price
			165.00



OnVUE
English (US)
System Test
I confirm that on my exam day I will be using this same testing space, computer, and internet connection.
Alert! Work computers generally have more restrictions that may prevent a successful test. Ensure you are not behind a corporate firewall, and shut down any Virtual Private Networks (VPNs) or Virtual Machines.
1. Copy Access Code
Click 'Copy Access Code'.
This code will authorize you to perform a system test.
